                                                                                                        8
                                                                                                                                                                                                                                                                                                                                                            The present sequence represents the sequence encoded by the 5' end of clone 9, and is a TRAF2 binding protein. Clone 9 is a partial clone, which lacks most of its 5' end of the coding DNA sequence. A CDNA library prepared from B-cells was screened for proteins that associate with TRAF2, and clone 9 DNA isolated. The clone 9 protein is capable of TRAF2, and clone 9 DNA isolated. The clone 9 protein is capable of pinding to at least amino acids 222-501 of TRAF2. The TRAF2 binding protein or mediation in cells of the activity proteins can be used for modulation or mediation in cells of the activity of NF-kappaB or any other intracellular signalling activity modulated or mediated by TRAF2. TRAF-binding proteins are sepecially used for concept of pathological conditions associated with NF-KB induction, e.g. acute hepatitis, autoimmune-induced cell death, e.g. catable of the beta langerhans cells or the pancreas that results in capable of the beta langerhans cells or the pancreas that results in coligodendrocytes in the brain in multiple sclerosis, and AIDS-inhibited Toligodendrocytes in the brain in multiple sclerosis, and AIDS-inhibited Toligodenotrocytes in the brain in multiple sclerosis, and AIDS-inhibited Toligodenotrocytes in the brain in multiple sclerosis, and AIDS-inhibited Toligodenotrocytes in the brain in whith a creating of ligands capable of binding to a protein, which are useful for modulating cellular activity modulated/mediated by TRAF2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              241

The present sequence is human tumour necrosis factor (TNF) receptorassociated factor (TRAF2) binding protein, IREN. A fragment of this IREN molecule is capable of binding to TRAF2 protein at position 255-501. The invention relates to human tumour necrosis factor (TNF) receptoral invention relates to human tumour necrosis factor (TNF) receptoral results of the sequence of the sequ
6; 118pp; English.
